

Water for everyone

CLEAN WATER FOR TANZANIA.

Boiling water over a fire is the most common way to fight pathogens. However, this is associated with high fuel consumption and with environmental and health damage. This year we again support a project by Ingenieure ohne Grenzen e.V. (Engineers Without Borders) with a donation. The aim of the project is to develop a solar thermal water disinfection plant for developing countries such as Tanzania.

We wish all our customers and partners a peaceful holiday season and a healthy year 2019.
